

Evaluation & Metrics

[7, 10]
[10, 10]
[7, 15]
[10, 15]

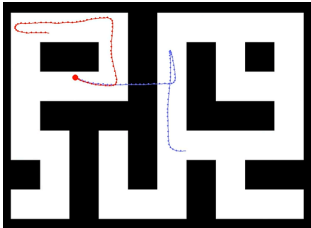

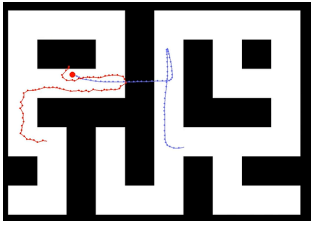

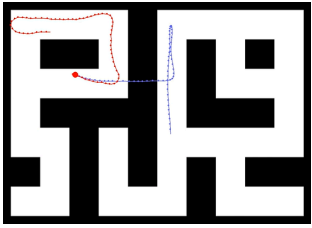

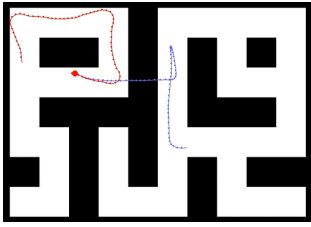

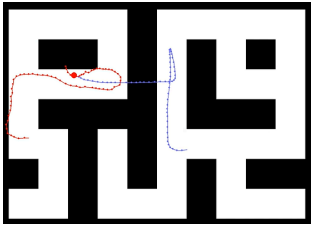

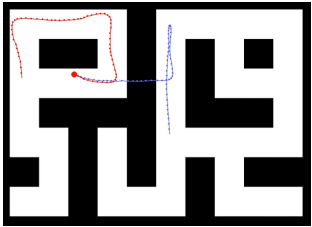

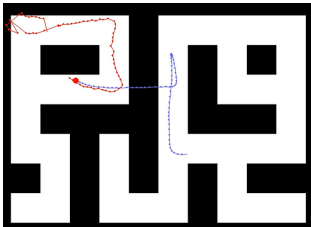

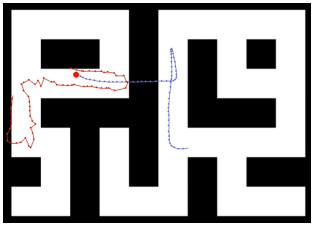

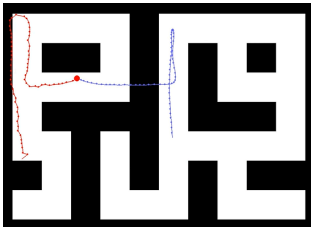

Do this for 6 start points.

Evaluation Metrics

- # Times Touches Wall (did it go through or graze?)
 - 7/24 = 0.2916 — 2 went through a wall.
- # Times U-Turn
 - 4 out of 12 of them did a U-turn (and 1 of them did it thrice)
 - 9/24 did U-turn, and 4 4 1.
- Smoothness/Noisyness of Path
- 90 Degree Structure of Path
 - 19/24 had 90 degree structure and general smoothness
 - 7/24 were noisy and had weird shapes
- Pixels Explored (“Smartness” of Path)
 - Baseline 7 cells (8 8 9 8 with 0 1 2 0 cells re-explored)
 - Baseline 8 cells (9 9 9 6 with 2 0 0 0 cells re-explored)
 - Baseline 8 cells (9 10 5 10 with 0 0 0 3 cells-re-explored)
 - Baseline 7 cells ([6, 7, 8, 6] 0 1 1 0
 - Baseline 6 cells [9, 9, 10, 8] 1 0 1 0
 - Baseline 9 cells [5, 6, 6, 7] 0 1 1 2

Virtual Tail with Self-Cost starting at X=320 Y=320

	# Sampling Steps	10	15	20
--	------------------	----	----	----

Maze Cost Weight (MCW)				
7	0 1 $\frac{4}{5}$ $\frac{4}{5}$ 1, 1,			
10	A. 0 1 0 2 B. 1 2 0 1 C. 3 4 5.5 D. 4 3 4 2.5 Baseline 7 cells. E. 8 cells explored, 1 re-explored F. 8 cells explored, 2 re-explored G. 9 cells H. 8 cells, re-explored			
15				

7	0 0 0 1 – self-cross 0 0 0 1 – Baseline 9 cells - 9 cells explored 9 cells 9 cells 6, 2 cells u turned			
10				
15				

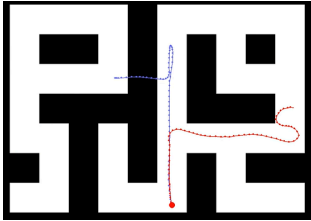

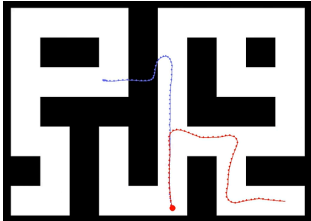

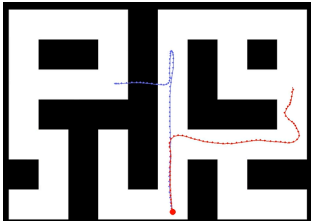

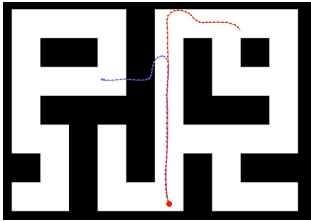

Virtual Tail with Self-Cost X=500 Y=775

	# Sampling Steps	10	15	20
Maze Cost Weight				

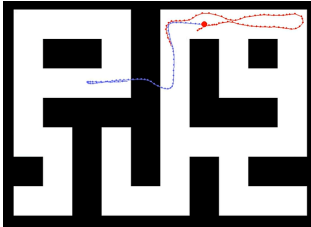

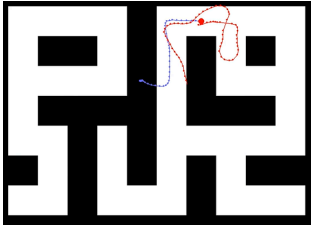

9				
---	--	--	---	--

Sometimes lower maze guidance is better but noisier
Higher maze guidance will leave you in the white, but you are prone to more u-turning.

X = 600, Y = 775

	# Sampling Steps	10	15	20
Maze Cost Weight (MCW)				
7				
10				

X = 750, Y = 150

	# Sampling Steps	10	15	20
Maze Cost Weight (MCW)
